

FLEXPOST
Impact Resistant Signposts

What Competition?

Flexpost blows the competition in sign posts out of the water.

It is always wise to evaluate the competition in the product market. For Flexpost, we have to ask, what competition? To be honest, there is no other product out there that can serve you like Flexpost. Of course there are all the rigid sign posts out there (i.e. U-Channel, Square Channel, Concrete Blocks, etc.) that claim they compete on price but if you evaluate the "True Cost" of those systems after just ONE damage and repair incident, they are all much more costly than the Flexpost products which truly can eliminate costly repairs.

Flexpost wants you to have the most cost effective, long-term solution. So we are going to brief you on the other flexible/breakaway sign post options out there and let you make the decision for yourself.

SNAP'n SAFE™

SNAP'n SAFE offers an anchor that will breakaway upon impact. They claim that this will decrease the additional costs of repair and replacement of the anchor and sign post by 42%.

Why choose FlexPost instead?

FlexPost has a similar breakaway system that saves you 100% of repair and replacement costs. That's 58% more than SNAP'n SAFE offers and you don't have to hassle with the repair process and sacrifice your image with damaged property appearance while you wait!

V-Loc®

V-Loc markets a sign post anchor that can be re-used after its breakaway action has taken place following a knockdown. V-Loc encourages customers to acknowledge that the anchor replacement will be avoided and the only additional investment required will be in the replacement of the locking wedge used in the device.

Why choose FlexPost instead?

V-Loc only saves the anchor of your sign post. Flexpost has designed a product that not only breaks away on impact, but we save you the anchor and the sign post. Also, FlexPost requires no replacements at all because the flexible spring action just bounces back into place!

Impact Recovery

This company has hit the market with a flexible sign post made of plastic with spring action to hold a durable plastic sign.

Why choose FlexPost instead?

Flexpost is the only product on the market that offers a flexible steel system coupled with a galvanized steel post for maximum durability and longevity.

Flexibility, Durability, Low-Maintenance – Flexpost has it all, making it hard for competitors to keep up. Flexpost is the obvious choice for you and we also take pride in our attractive appearance that adds to your image!
