

FALL 2010 NEWSLETTER

Flexpost's flexible sign posts and FlexBollards offer a permanent solution to a problem that has existed for a long time - Bent Sign Posts.

We encourage our customers to install the Flexpost product before the weather turns cold and get ahead of the maintenance calls in the spring.

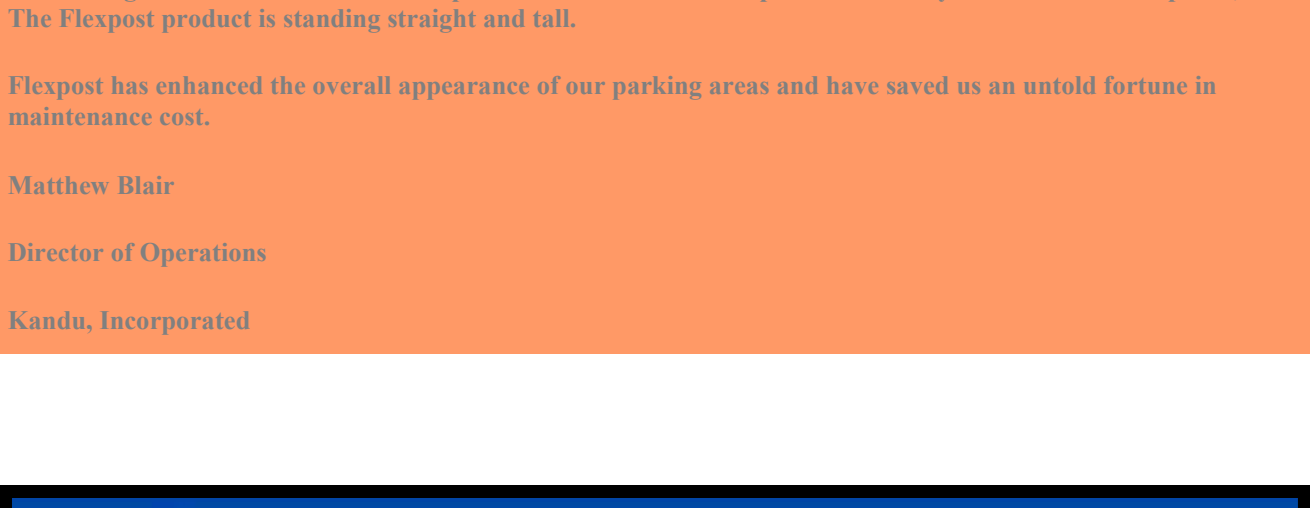

In the past, you have probably installed U-channel posts in the fall and have to repair or replace a large percentage of those posts when spring rolls around.

Flexpost products offer 360° of flexibility and withstand winds of up to 75 MPH. Flexpost products are modular and can be very easily maintained.

Do yourself a favor and invest in your "first impression" today by being flexible with your parking lot signage by using Flexpost!

Interested in promoting the FlexPost product line?
Flexpost is accepting dealer applications throughout North America.

KANDU INCORPORATED

In an effort to reduce parking lot maintenance as well as to increase safety in our parking lots Kandu Incorporated installed 22 standard Flexpost units and 6 FlexBollards in the spring of 2007.

This allowed us to remove our concrete wheel stops or portable curbs, thus avoiding tremendous liability for our company. In addition, it reduced the repair and maintenance of our handicap and visitor parking lot posts.

I am happy to say that we have not had a need to replace one sign post in 3 years!

Even though we have had documented proof that a few of the Flexposts were hit by vehicles and snow plows, The Flexpost product is standing straight and tall.

Flexpost has enhanced the overall appearance of our parking areas and have saved us an untold fortune in maintenance cost.

Matthew Blair
Director of Operations
Kandu, Incorporated
