

SAFETY SMART DELINEATOR[®] by FLEXPOST[®]

The Safety Smart Delineator by FLEXPOST[®] was designed for high vehicle traffic areas. Upon a vehicle impact, the delineator will break away from the base thus eliminating damage to the vehicle and signage. Currently, the Safety Smart Delineator is available as a portable unit or with a natural ground anchoring system. In the future, you will have the option to install the Safety Smart Delineator permanently on concrete or asphalt surfaces.

The Safety Smart Delineator comes in three parts: an injection molded impact resistant polypropylene post, a Xenoy stake for natural ground surfaces or a portable base unit and a glass filled nylon pin which connects the post to the base.

The post is tethered to the base with a 36" cable to prevent losing the delineator post after impact. The only component that needs to be replaced after it is hit is the sheer pin. There are no special tools, equipment or training needed to replace a shear pin. The portable units are mounted on a 20 pound base (or optional 9 pound base).

Some areas of applications include Warehouses, Parking Lots, Parking Garages, Event Parking, Fencing, and Temporary Barricades just to name a few.
